DETAILED ACTION

Allowable Subject Matter

1. Claims 99-113 are allowed.
2. The following is an examiner's statement of reasons for allowance: The Gung reference which teaches a first magnet subarrangement encircling a second magnet subarrangement and a third outer magnet subarrangement with all three magnet subarrangements rotated in a sputter reactor, fails to teach the first magnet subarrangement having a radial extension extending towards a center area formed by the second magnet subarrangement and the third magnet subarrangement being crescent-shaped and generating a crescent-shaped magnetic flux. While the prior art (see Conclusion below, US Patent Nos. 4,746,417; 5,320,728; 5,374,343; 7,119,489) teaches either a first magnet subarrangement comprising a radial extension extending towards a center area formed by a second magnet subarrangement or a third, outer magnet subarrangement being crescent-shaped and generating a crescent-shaped magnetic flux, these components have not been arranged in the claimed manner nor is there motivation as to why one of ordinary skill in the art would arrange these magnet subarrangements in the claimed manner.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US Patent Nos. 4,746,417 and 7,119,489 teach a sputter magnetron comprising a crescent-shaped magnet subarrangement but do not teach a radial extension extending towards a center area of a circular loop formed by a second magnet subarrangement; US Patent Nos. 5,320,728 and 5,374,343 teach a sputter magnetron having two magnet subarrangements with the outer magnet subarrangement having a radial extension extending towards a center area of a circular loop but do not teach a third, outer magnet being crescent-shaped with a corresponding crescent-shaped magnetic field.
